## Professional Summary

Senior Software Engineer with 7+ years of experience specializing in .NET ecosystems and distributed architectures. Proven track record of building high-performance systems and modernizing legacy platforms (e.g., monolith to microservices). Passionate about sports performance and financial systems, seeking a hands-on Individual Contributor role to dive deep into complex technical challenges. A dedicated, high-performing engineer who thrives in product-focused environments and brings 100% commitment to the team's goals.

## Experience

- **Imperia SCM** — Spain
  *Tech Lead & Squad Lead (.NET)* — *Jul 2025 – Present*
  *Senior Software Developer* — *Feb 2025 – Jul 2025*
  - **Technical Leadership & Mentoring**: Leading a cross-functional squad (Backend, Frontend, QA, R&D), mentoring mid-level engineers in Clean Architecture patterns, and enforcing rigorous async code reviews to elevate overall code quality.
  - **Product-Centric Development**: Partnering directly with Product Managers to translate complex Supply Chain business requirements into scalable .NET architectures, ensuring feasibility and performance.
  - **Hands-on Engineering**: Maintained active contribution to the core codebase, performing code reviews and implementing critical backend features using C# and .NET to ensure system stability during rapid growth.
  - **Process Optimization**: Promoted from Senior Developer to Tech Lead within 5 months due to technical impact. Streamlined development workflows and collaborated on CI/CD pipeline improvements to improve the team's delivery pace.
  - **AI-Augmented Development**: Leveraging **LLM tools (Claude Code, Codex)** and advanced prompt engineering to accelerate development cycles, refactor legacy modules, and optimize boilerplate generation, increasing squad velocity.
- **EYSA Group** — Spain
  *Sr. Software Developer* — *Aug 2024 – Dec 2024*
  - **Parking Management System**: Architected and developed core microservices for a distributed parking platform using .NET 8, ensuring high availability and fault tolerance for real-time vehicle processing.
  - **High-Volume Data Processing**: Engineered a critical ETL solution to ingest millions of records from DGT regulatory files, leveraging SQL BulkCopy and optimized EF patterns to ensure data consistency and high-throughput performance.
  - **API Optimization**: Designed high-performance data aggregation layers using GraphQL and Entity Framework Core, significantly reducing latency for complex client queries.
- **Clarika Software + Innovation** — Canada (Remote)
  *Software Developer* — *Nov 2021 – Jun 2024*
  - **Legacy Modernization (Launchpad)**: Led the strategic migration of a mission-critical legacy monolith to a modern .NET ecosystem, decoupling frontend logic (Razor to React) and refactoring backend architecture.
  - **Security & Identity**: Implemented a robust RBAC (Role-Based Access Control) system using .NET 8 and Cosmos DB, ensuring secure data access and compliance for enterprise clients.
  - **Performance Tuning**: Optimized complex reporting queries and database indexing, resulting in a 60% reduction in report generation time.
- **PriceWaterhouseCoopers (PwC)** — USA (Remote)
  *Ssr. Software Developer* — *Jun 2020 – Nov 2021*
  - **Enterprise Tax API Hub**: Developed a scalable centralized API platform for tax processing using Azure Functions and Service Bus, enabling real-time integration across multiple internal business units.
  - **Cloud Infrastructure**: Collaborated on deployment pipeline usage and successfully implemented Azure SQL performance tuning strategies to handle high-concurrency tax filing periods.

- **Accion Point Group** Argentina
  *Software Developer* *Apr 2018 – Jun 2020*
  - **Hardware Incubator**: Engineered a robust desktop agent using WinForm and .NET Framework for a hardware incubator project, enabling seamless communication via USB, TCP, and IP through the MODBUS protocol.
  - **Bantotal**: Led the technical integration of a core banking system using C# and REST/SOAP APIs, working with SQL and Oracle databases to extend functionalities and enhance communication with external systems.

## Education

- **Universidad Tecnologica Nacional UTN FRSF** Santa Fe, Argentina
  *Coursework in Information Systems Engineering*
- **Macagno, Technical School** Santa Fe, Argentina
  *Technician in Organizational Management*

## Technical Skills

- **Languages**: C#, SQL, JavaScript/TypeScript, HTML/CSS
- **Core Frameworks**: .NET 8, .NET Core, ASP.NET WebAPI, Entity Framework Core, Dapper, React
- **Architecture & Patterns**: Microservices, Clean Architecture, DDD, CQRS, SOLID, Event-Driven Architecture, REST, GraphQL
- **Cloud & DevOps**: Azure (Functions, Service Bus, SQL), Docker, CI/CD (Azure DevOps, GitHub Actions)

## Notable Projects

- **Viajecito (Travel Management Web App)**: Architected and developed a full-stack Next.js application for seamless travel itinerary planning. Integrated AI capabilities using LLMs (Antigravity framework) and advanced prompt engineering to automate and enhance user travel planning experiences.
- **Distributed Task Manager (Personal PoC)**: Full-stack productivity suite built as a Monorepo. Features a .NET 8 Microservices backend (EF Core, Docker containers) and a Next.js frontend, demonstrating end-to-end architectural patterns.
